

Project Documentation

1.Introduction

Project Title: Microgoal

Team ID: SWTID-2026-9750

Team Leader: Madhumitha k (madhuusha1212@gmail.com)

Team Members:

Yuvasri M(sumathi4843@gmail.com)

Sheeba D(dsheeba025@gmail.com)

Sharmila D(sharmilamaha60@gmail.com)

Renuka M(akunerm2372007@gmail.com)

2. Project Overview

Definition:

The MicroGoal project is designed to help individuals improve productivity and personal development by setting small and achievable goals. Many people fail to achieve their goals because they feel overwhelmed by large tasks. MicroGoal solves this problem by dividing big goals into smaller steps. The system provides a simple interface where users can create goals, track their progress, and monitor their achievements over time.

3. Features

Definition:

Features represent the important functionalities available in the MicroGoal system.

Features of MicroGoal:

- User-friendly dashboard to view goals
- Create and manage micro goals
- Update goal progress
- Delete completed or unwanted goals
- Search and filter goalsc /
- Progress tracking and reports
- These features help users manage their daily goals effectively.

4. Architecture

Definition:

Architecture refers to the structure of the system and how different parts of the application interact with each other.

Architecture Use:

Frontend: React.js with Tailwind CSS

Used to create interactive user interfaces.

Backend: JSON (Local state management)

Used to temporarily store goal data.

Database: MySQL (Future implementation)

Will store user goals and progress permanently.

5. Setup Instructions

Definition:

Setup instructions explain the steps required to install and run the MicroGoal project on a system.

- Prerequisites
- Node.js
- MySQL
- Git
- Visual Studio Code

Steps

- Clone the project repository
Link: https://drive.google.com/drive/folders/1M5rtqlcTCuf_mE3VzTH-5k--25EHb8yO

6. Folder Structure

Definition:

Folder structure refers to the organization of files and directories in the project.

Example structure of the MicroGoal project:

microgoal-frontend/

|

├─ components/

├─ pages/

├─ context/

├─ hooks/

├─ assets/

└─ App.js

This structure helps developers manage the project efficiently.

7. Running the Application

Definition:

Running the application means executing the project so users can interact with the system.

Steps:

- Open the terminal
- Navigate to the project directory
- `cd microgoal-frontend`
- Run the project
- `npm start`
- Open the browser and visit
-
- The MicroGoal application will start and display the dashboard.

8. API Documentation

Definition:

API documentation describes how the frontend communicates with backend services. Currently, the MicroGoal system uses React Context and Hooks to manage data locally. In the future, APIs can be developed using Node.js and Express.js to store and retrieve data from a database.

9. Authentication

Definition:

- Authentication is the process of verifying the identity of users before allowing access to the system.
- In the current version of MicroGoal, authentication is not implemented. Future versions may include JWT (JSON Web Token) authentication to provide secure login and protect user data.

10. User Interface

Definition:

User Interface (UI) refers to the visual layout through which users interact with the system.

- MicroGoal includes the following UI pages:
- Login Page
- Dashboard showing goal progress
- Add / Update Goal Page
- Goal Tracking Page
- Reports Page
- Error / Not Found Page
- The interface is designed to be simple and easy to use.

11. Testing

Definition:

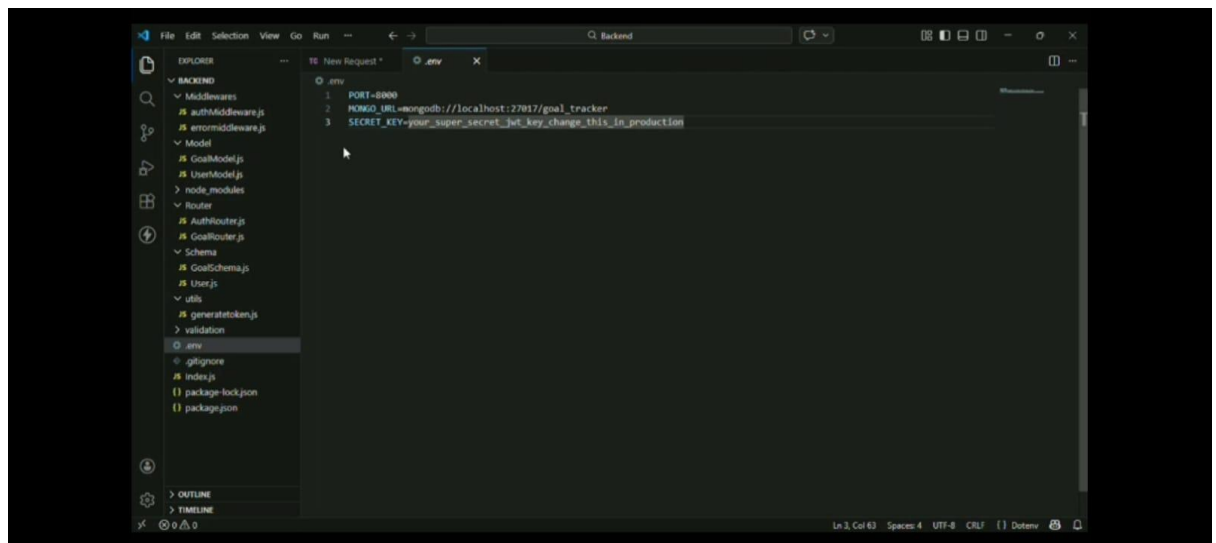

- Testing is the process of checking whether the application works correctly without errors.
- For the MicroGoal project, manual testing was performed using browser developer tools to check the functionality of each feature.

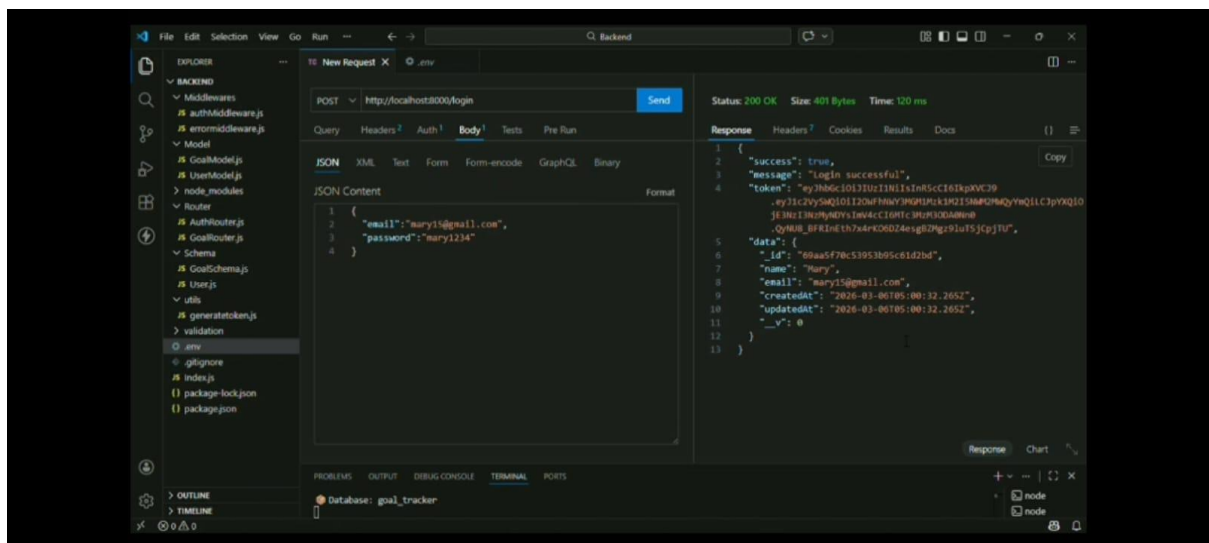

Future testing may include:

- Jest for frontend testing
- Postman for API testing

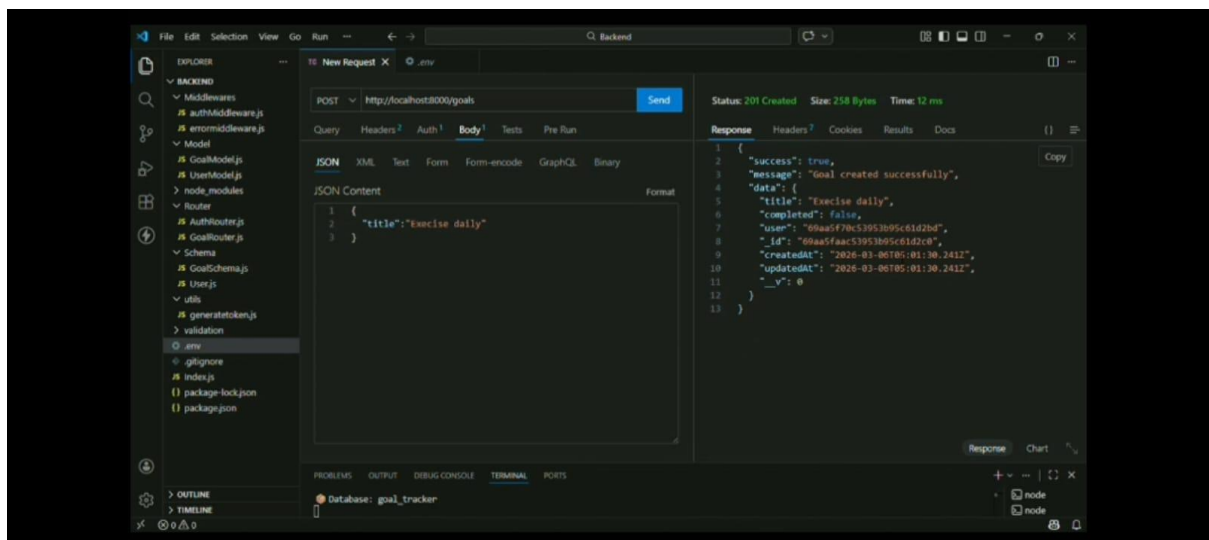

12. Screenshots or Demo

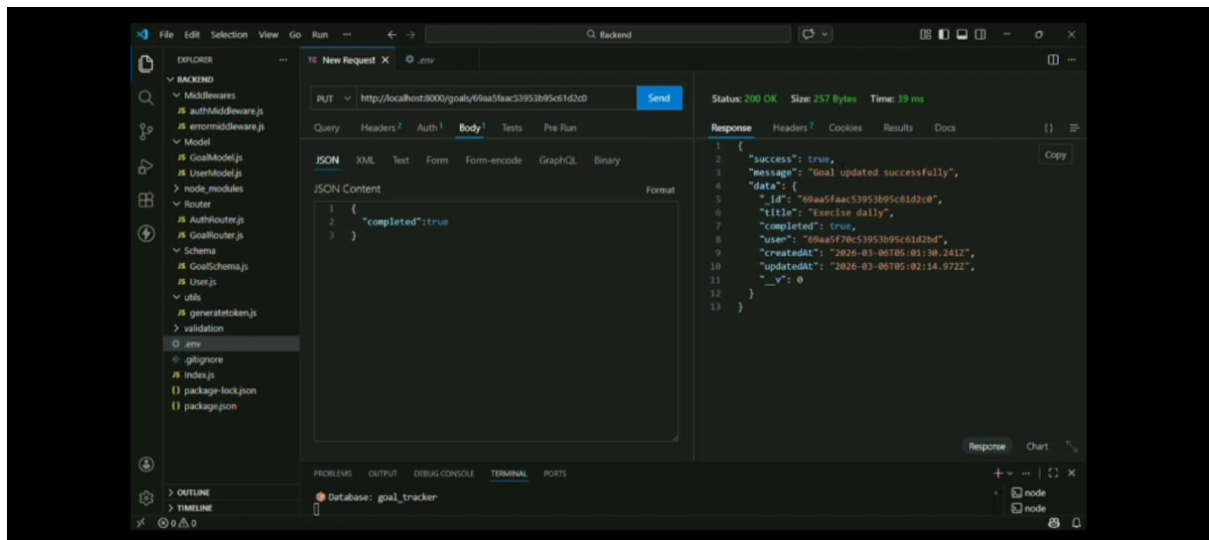

1.Auth.js

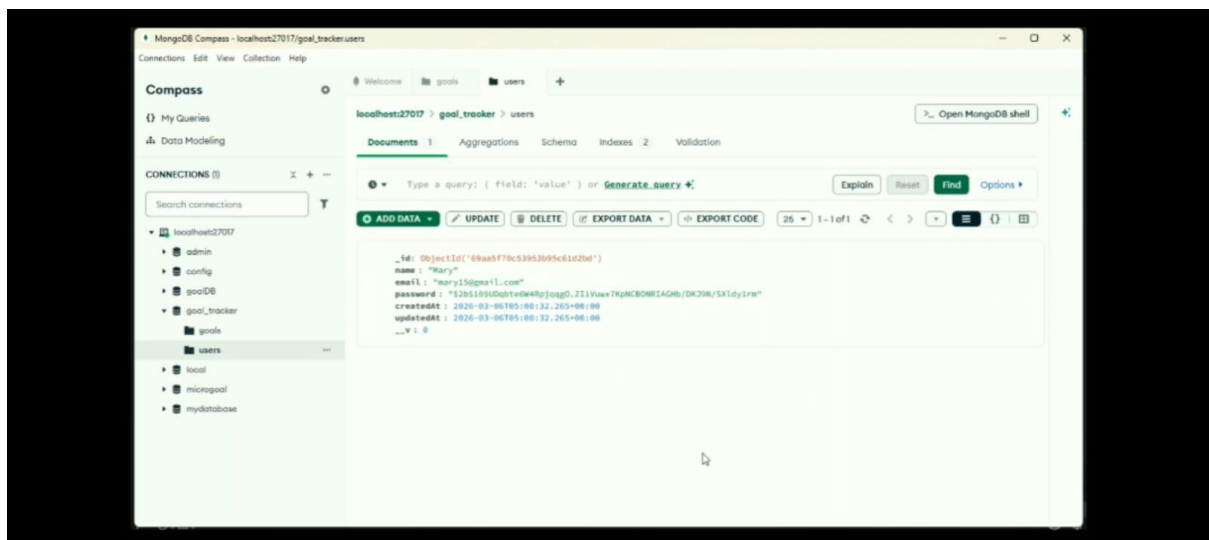

3.User login

4.MongoDB Connection

13. Known Issues

Definition: Known issues refer to the current limitations or problems present in the system.

- Current issues in MicroGoal:
- User authentication not implemented
- Backend API not connected
- Data is stored only in local state

14. Future Enhancements

Definition:

Future enhancements describe improvements that can be added in upcoming versions of the project.

Possible enhancements:

- Integration with Node.js and Express.js backend
- Implementation of MySQL database
- Secure login using JWT authentication
- Advanced progress tracking and analytics
- Mobile application support
